

**CHALLENGE**

A leading Pensions and Fund Management company required two disparate Business Intelligence systems to provide reporting for the group.

Standard Life needed to build two Business Intelligence systems; one for their Mutual Funds division the other for the Pensions company.

**Challenge**

The product sets chosen for the two divisions were different; Mutual Funds had decided upon Business Objects; the Pension Company had selected Cognos. Both systems needed to drill through up to six million records and required a great depth of knowledge of the disparate products.

**Solution**

Peoplewware project managers, produced the specifications for both systems, managed the software vendors and sourced and managed the contractors who built the Universes and Cubes respectively upon which the reports were based.

**Benefits**

The systems were delivered on time and against budget, providing drill down and drill through 'exception' reporting to meet the agreed specifications.

**BENEFITS**

The systems were delivered on time and against budget, providing drill down and drill through 'exception' reporting to meet the agreed specifications.
